## **NOVELTY OF OUR PROJECT**

- **Name of the app**

“Mieten” is a German word for “HIRE ME !” is unique and justified in itself.

- **Path less traded**

To quote the director of CIIC, “We are happy that you guys are at least attempting to help us. This is seldom done.”

- **Unique approach**

Building a mobile application for the placement cell of NIIT University was although needed but never thought of. This is because students nowadays are more active on their mobile phones than on their laptops and “mails from the placement cell are generally discarded”, as mentioned by an official of placement cell.

Therefore, a mobile application that would cater to the needs of the placement cell, such as notifying students to urgently upload documents or notifying them about the companies that will be visiting in a few days or whatsoever.

- **One of a kind**

This app is one of a kind as apart from a regular placement cell app, it has features such as

1. **FAQ** – There is a portal where the student user can post his/her query that he wants to be answered by the placement cell and the admin user is able to view and answer them.
2. **Notification** – The app “Mieten” has this unique feature of raising instant notifications. An admin user, if he wants to select a student user and inform him to submit this document, can notify the student user referring to the context.
3. **Sample Papers** – The application also contains company-specific sample interview question papers for the student users to prepare for the interviews of those companies.

and few others.
